Main Resolved Issues

- LV/LV Transformer powersum calculation when UPS's are paralleled
- Error message correction for variable speed drives
- Application is not charging automatic solution for iC60N device for 230V load
- While selecting " Automatic" option for single phase loads connection , SC values doesnt appear in design area
- Color change issue of components during the open / close
- In IT earthing system, annotation instead of Ief2min application displaying Iefmin in downstream CBs
- Application is throwing object reference error while changing the Ku value.
- Index out of range error message issue for busbars
- BTS global offers as default calculated choice
